**Triple-IGU Features/Benefits Comparison**

**Cooler in Summer**
The total solar energy transmitted through Solarban 60 (2)(5) glass is 50% less than that transmitted by standard clear insulating glass.
- Lower SHGC numbers mean less summer heat
- Keeps interiors cooler
- Helps reduce cooling energy costs

**Transmits Visible Light/Appearance**
A window with Solarban 60 (2)(5) glass transmits almost 80% as much desirable visible light as standard clear insulating glass.
- Provides exterior appearance similar to clear glass
- Provides glare control in bright, sunny climates

**Fading Factors**
While Solarban 60 (2)(5) glass blocks 93% of damaging UV energy, it also blocks other contributors to fading — in all, 39% better than standard clear insulating glass.
- Helps protect interior furnishings, fabrics and carpets from fading

**Warmer in Winter**
The winter nighttime U-value (insulating value) of Solarban 60 (2)(5) glass is more than 61% better than standard clear insulating glass.
- Lower U-values mean higher performance
- Reduces furnace heat loss
- Helps reduce heating energy costs

Note: Tdw-ISO represents potential fading damage caused by both UV and visible light. It is considered by the U.S. Department of Energy and the International Standards Organization (ISO) to be a more accurate barometer of fade resistance than UV transmittance alone. All comparisons are center-of-glass based on a 1 3/8” (overall dimension) insulating unit containing three 1/8” (3mm) glass lites and two 1/2” (12mm) air-filled spaces for the standard clear insulating glass and 90% argon gas-filled spaces for the Solarban® 60 insulating glass. Actual glass performance may differ due to glass thickness, gas fill and glass to frame ratio.

Solar Heat Gain Coefficient (SHGC) measures how well a window blocks (or shades) the heat from sunlight. SHGC is the fraction of solar radiation transmitted through a window, as well as the amount that is absorbed by the glass and reradiated to the interior. Figures may vary due to manufacturing tolerances. All tabulated data are based on the National Fenestration Rating Council (NFRC) methodology, using the Lawrence Berkeley National Laboratory’s Window 7.3 software.

Vitro customers use our products to manufacture Energy Star compliant windows, doors and skylights.
